This website allows you to compute physicochemical descriptors as well as to predict ADME parameters, pharmacokinetic properties, druglike nature and medicinal chemistry friendliness of one or multiple small molecules to support drug discovery.

The main article describing the web service and its underlying methodologies is [SwissADME: a free web tool to evaluate pharmacokinetics, drug-likeness and medicinal chemistry friendliness of small molecules. *Sci. Rep.* \(2017\) 7:42717.](#)

For details about development and validation of iLOG, please refer to this article: [iLOGP: a simple, robust, and efficient description of n-octanol/water partition coefficient for drug design using the GB/SA approach. *J. Chem. Inf. Model.* \(2014\) 54\(12\):3284-3301.](#)

For details about development and validation of the BOILED-Egg, please refer to this article: [A BOILED-Egg to predict gastrointestinal absorption and brain penetration of small molecules. *ChemMedChem* \(2016\) 11\(11\):1117-1121.](#)
